# New Screening Tool to Integrate Palliative Care into Primary Care within FQHC

K. Pelerin, CPHQ, Quality Manager; N. Pirwani, MBA, Practice Transformation Manager; L. Ody, LPN, Patient Navigator; A. Polanco, BS, Clinical Analyst

### **Topics Addressed:**

- Measuring impact value
- Specific patient populations
- Integration of palliative care to specific settings (e.g. primary care)

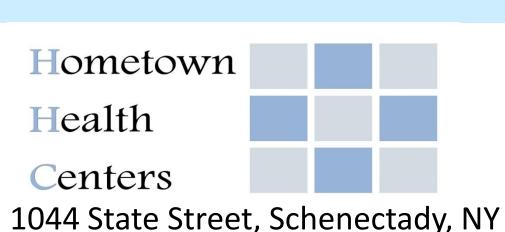

#### The Problem:

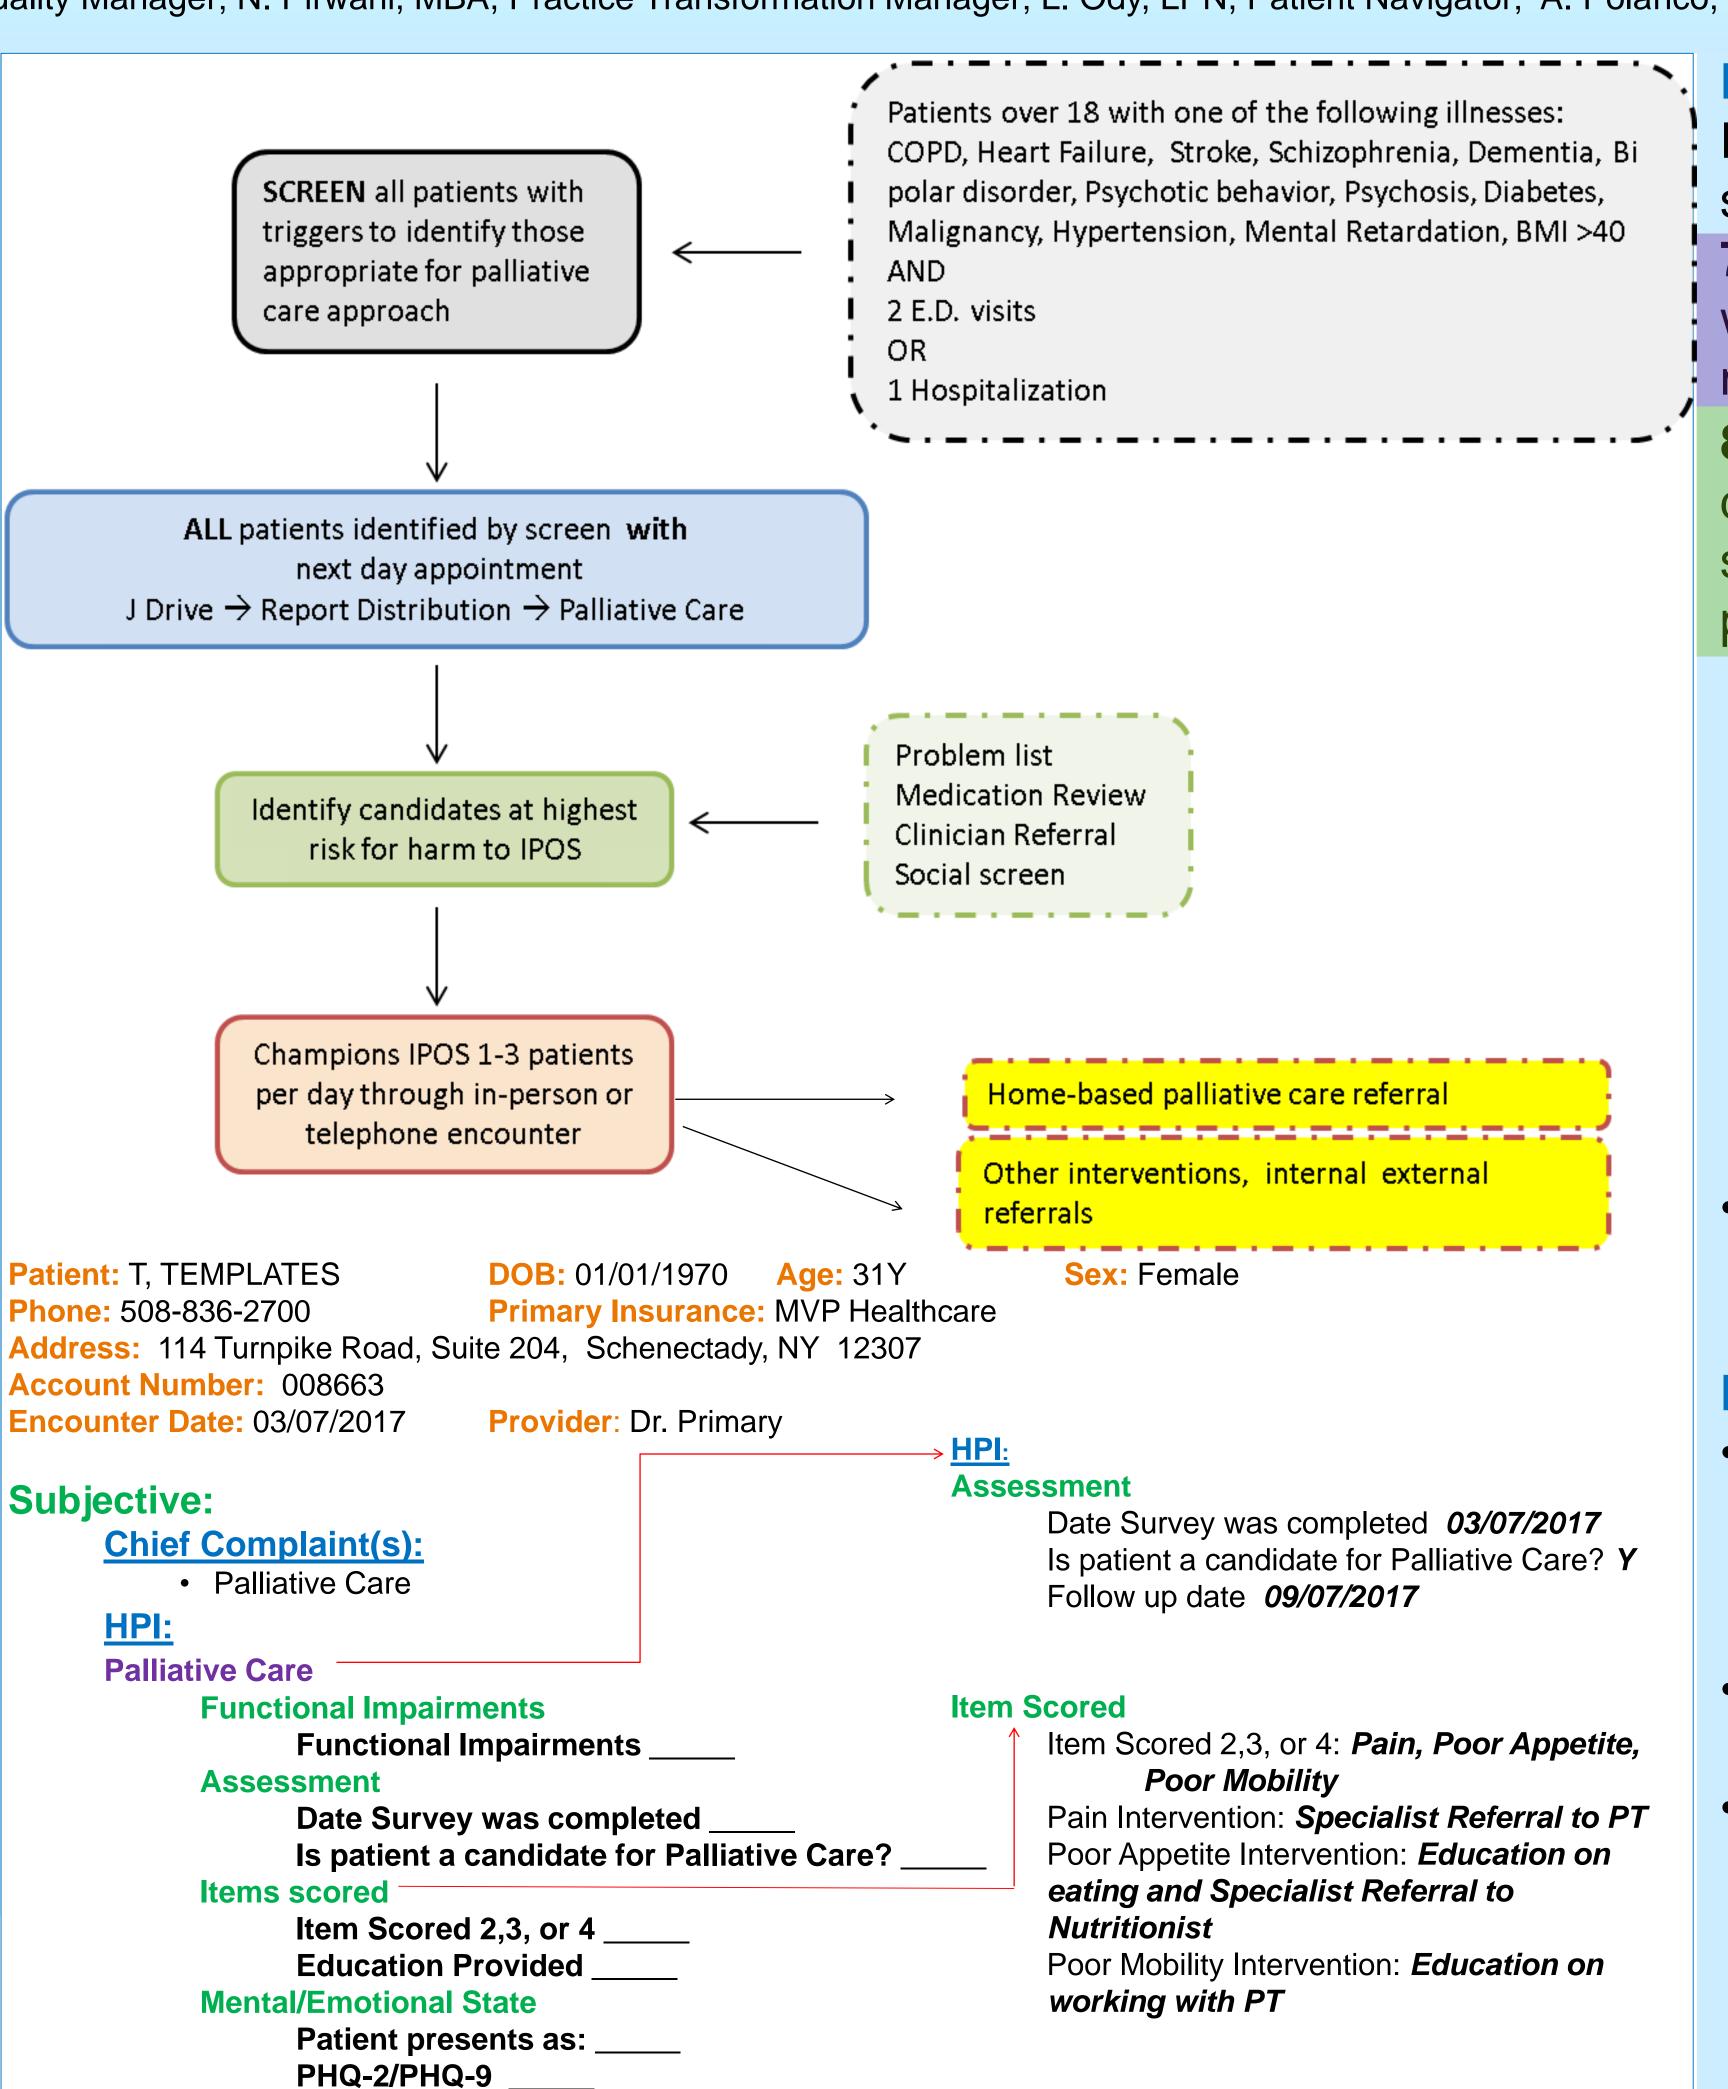

Hypothesized Solution: Increasing access to palliative care will assist primary care patients with serious illnesses receive relief of symptoms, pain & stress, improving the patient & his or her family's quality of life while advancing compassionate care.

## **Research Objectives:**

- Describe the triggers and screening tool used to identify high-risk primary care patients for referral to palliative care
- 2. Appreciate the role motivational interviewing plays in engaging patients & their families
- 3. Relate how palliative care screenings & motivational interviewing leads to advancement of patient & caregivercentered care

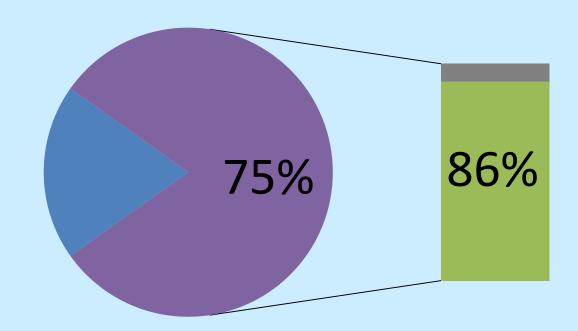

Referral to BH/Social Worker

#### **Results:**

From May 1 through Sept 30, 2017, screened 85 patients using the IPOS.

75 % of patients reported difficulty with either symptom, pain or stress management due to their illness
86% of patients who reported difficulty with either symptom, pain or stress management were identified for palliative care services.

Patients reported difficulty with 2.2 symptoms: pain, weakness, poor mobility and trouble breathing.

 98 % of the time, patient navigator offered a symptom, pain or stress management-related intervention

## **Discussion and Implications:**

- Potential to improve quality of life for patients by integrating palliative care/offering interventions focused on symptom management.
- Tool did not always result in a referral to Palliative Care specialist
- Screen/motivational interviewing assisted in offering interventions.
  - Continue to administer IPOS
- Study appropriateness of triggers
- Connect with community palliative care specialists
