Introduction

Background: The University of Iowa Hospitals and Clinics (UIHC) has a unique palliative care volunteer program that has actively recruited college student volunteers since 2010. They provide companionship, legacy building activities, and access to hospital services. There is currently no published research examining the effects of palliative care (PC) volunteering on volunteers in this age group.

Purpose: This study examines the personal and professional impacts that palliative care volunteering has had on collegiate volunteers.

Methods

• 25-question email survey with closed and open-ended items sent to previous and current (2010-2017) PC student volunteers
• Surveys were anonymous, volunteers free to skip any question
• Descriptive statistics used to characterize the sample
• Number (%) of responses to survey items calculated
• Items focused on career path and free text entries were analyzed

Results

Early Critical Conversations

• Majority of respondents in sophomore/junior year
• 23 volunteered 2+ semesters
• 32/53 were interested in health care professions

Q. Have you initiated any conversation(s) about PC to anyone not already involved with it?
R. Yes: 91% spoke about PC to people within their social circles.

In addition, several volunteers joined the unit due to peer recommendations:

Career Decisions

Q. Has PC volunteering made any impact on your career plans or choices?
R. Yes: 63%

Q. Has PC volunteering made you more likely to be involved in palliative or hospice care in the future?
R. Yes: 71%

Q. Did PC volunteering change your view of patient care?
R. Yes: 77%

The Ripple Effect

Q. Have you initiated any conversation(s) about PC to anyone not already involved with it?
R. Yes: 91% spoke about PC to people within their social circles.

Lessons Learned

Listening

"I am learning how to listen more than I speak."

Empathy

"I value empathy significantly more... the importance of getting to know the patients."

Being There

"I learned that simply being available to someone can be therapeutic."

The Story

"Every person has a story worth listening to."

Personal Impact

• 96% are now better able to talk to their own family members who have serious illnesses
• 94% have improved their ability to discuss end of life situations

"It changed my life. The experience humbled me greatly and reminded me that life is precious and so are the connections we make with others."

"...volunteering at PC helped with mourning for my own loss while helping others through losses of their own."

"It has had a profound impact on my value for empathy... has helped changed my outlook towards life.

Conclusion

• PC volunteering may increase likelihood of student volunteers to pursue health and palliative care-related careers down the road.
• Volunteers often serve as an informal speaker bureau about PC.
• The unique exposure and clinical interactions may change student volunteers’ understanding of patient care and their outlook on life.
• The important skills these volunteers have gained make them ideal candidates to fulfill the demand for PC workers.

Next Steps

• Future research will include following student volunteers longitudinally
• Academic medical centers may consider development of similar programs
• PC collegiate volunteer training manual for academic medical centers
